## LUMBER PRODUCTION IN OREGON AND WASHINGTON, 1869-1948

By

F. L. Moravets  
Pacific Northwest Forest and Range Experiment Station

Frequent requests for statistics on lumber production come from the lumber industry, allied forest-products industries, many other industries, banks, trade associations, foresters, and public agencies. Many of these requests are for detailed information--yearly production by species and by counties. The objective of this publication is to present available statistics on lumber production in the States of Oregon and Washington in as much detail as possible.

The earliest statistical record of lumber production in the two States is for the year 1869 when the Bureau of the Census, U. S. Department of Commerce, in its census of manufactures, reported a total of 75 million board feet produced in Oregon and 129 million in Washington. Subsequent decennial censuses of manufactures report production for 1879, 1889, and 1899. Beginning in 1904 and continuing unbroken through 1948 there is a yearly record.

Prior to 1905 the Bureau of the Census collected and published the statistics on production in Oregon and Washington. For the years 1905, 1906, 1915 to 1918, inclusive, and 1920, the Forest Service, U. S. Department of Agriculture, collected and published the statistics; in 1913 the Bureau of Crop Estimates of the Department of Agriculture collected the basic information; for the years 1921 to 1946 inclusive, the Forest Service conducted the census in cooperation with the Bureau of the Census<sup>1/</sup>; and in 1947 the census was taken by the Bureau of the Census alone. Production data for 1948 for the Douglas-fir subregion of western Oregon and western Washington were collected cooperatively by the West Coast Lumbermen's Association and the Forest Service; those for the ponderosa pine subregion of the eastern portions of the two States were collected by the Western Pine Association and the Forest Service.

Throughout the period 1869-1948 the lumber production statistics for the two States have been obtained through a mail canvass of all known sawmills, supplemented in the majority of the years by a field follow-up of the sawmills that did not respond to the mail canvass. During the period 1869 to 1912 there was no field follow-up except in the decennial years--1869, 1879, 1889, and 1899. Beginning in 1913 and through 1947 there was a field follow-up of all nonrespondents. In 1948 the follow-up consisted of field canvassing all nonrespondents

---

<sup>1/</sup> Steer, H. B. Lumber Production in the United States 1799-1946.  
U. S. Dept. Agric. Misc. Pub. 669, Oct. 1948.

with an annual production of 5 million feet or more, and a randomly selected sample of all nonrespondents with less annual production. The 1948 production statistics collected by the mail canvass and field follow-up, representing 98.4 percent of total estimated production for the two States were without sampling error; those collected by the sampling procedure were subject to sampling error. On the basis of total estimated production, however, this sampling error was very small. The chances are 2 out of 3 (one standard error) that total estimated production did not vary from actual production by more than  $\pm 0.4$  percent; the chances are roughly 19 out of 20 that it did not vary more than  $\pm 0.8$  percent.

Statistics for the years 1869 to 1941 inclusive, do not include the production of sawmills producing less than 50 thousand board feet; those for the years 1942 to 1948 inclusive, include production of all sawmills.

The statistics are presented in three tables. Two of the tables show production by subregion. The Douglas-fir subregion includes all of the area in Oregon and Washington west of the summit of the Cascade Range; the ponderosa pine subregion includes all of the area east of the summit. Jackson, Josephine, and Hood River counties, Oregon, were formerly shown in some statistical releases on lumber production as part of the ponderosa pine subregion but in this publication their production for all years is included in that of the Douglas-fir subregion.

Table 1 shows lumber production and number of sawmills in Oregon by subregion, year, and county, 1925 to 1948 inclusive; table 2 shows similar information for Washington. In these tables it was necessary to make a number of combinations of county production figures to avoid disclosing the operations of individual establishments. This was particularly true of counties in the ponderosa pine subregion where one or two large sawmills may have produced a large portion of the total production in the county.

Annual lumber production by species, 1869, 1879, 1889, 1899 and 1904 to 1948 inclusive, in Oregon, is shown in table 3 and in Washington in table 4.

Table 5 shows annual production in Oregon by species and subregion, 1925 to 1948 inclusive; table 6 shows similar statistics for Washington.

During the last 25 years sawmills in Oregon and Washington have produced 30 percent of the total volume of lumber manufactured in the United States in that period. Peak year of combined production in the two States was 1926 when a total of 12.1 billion board feet was milled. In Washington, which led the States of the nation in lumber output from 1905 through 1937, with the exception of 1914, greatest annual production was also in 1926, amounting to 7.6 billion board feet. In Oregon, which has led since 1937, a production of 7.8 billion board feet in 1948 is the peak to date.

Table 1.--Lumber production and number of sawmills in Oregon by subregion, year, and county, 1925 to 1948, incl.\*

1948 production for ponderosa pine subregion from data collected by Western Pine Association and Forest Service.

The following combinations of county production figures were necessary to avoid disclosing operations of individual establishments:

1/ Island, Jefferson, San Juan, Skagit - 1925 to 1930 incl., 1933.

Clallam, Island, Jefferson, San Juan, Skagit - 1931.

Island, Jefferson, San Juan, Skagit, Whatcom - 1932.

Clallam, Island, Jefferson, San Juan - 1934.

Clallam, Island, Jefferson - 1935.

Island, San Juan - 1936, 1942, 1943, 1944, 1945, 1948.

Island, Jefferson, San Juan - 1939, 1940.

Jefferson, San Juan, Skamania, Wahkiakum - 1941.

Island, Jefferson - 1945.

2/ Kitsap, Mason - 1925 to 1940 incl., 1946, 1947, 1948.

Kitsap, Mason, Whatcom - 1941.

Kitsap, Mason, Thurston - 1942 to 1945 incl.

3/ Cowlitz, Skamania, Wahkiakum - 1925, 1935, 1936, 1938 to 1940 incl., 1942.

Cowlitz, Skamania - 1926, 1927, 1933.

Skamania, Wahkiakum - 1929 to 1931 incl., 1937.

Pacific, Skamania - 1932.

Pacific, Wahkiakum - 1943 to 1945 incl., 1948.

4/ Douglas, Kittitas - 1942.

5/ Asotin, Columbia, Spokane - 1925 to 1928 incl., 1931, 1933.

Asotin, Columbia, Whitman - 1929, 1930, 1934.

Columbia, Spokane - 1932.

Asotin, Columbia - 1935.

Asotin, Columbia, Garfield - 1936.

Asotin, Garfield, Walla Walla, Whitman - 1937, 1940.

Garfield, Walla Walla, Whitman - 1938, 1941.

Asotin, Columbia, Garfield, Walla Walla, Whitman, 1939, 1946.

Asotin, Columbia, Walla Walla, Whitman - 1942, 1944, 1945.

Asotin, Columbia, Walla Walla - 1943.

Asotin, Columbia, Garfield, Walla Walla - 1947, 1948.

6/ Lincoln, Pend Oreille - 1925 to 1929 incl., 1931 to 1938 incl.

Lincoln, Pend Oreille, Yakima - 1939 to 1941 incl.

Ferry, Lincoln, Pend Oreille - 1942.

Grant, Lincoln, Pend Oreille - 1943.

Grant, Lincoln - 1944 to 1946 incl.

Grant, Yakima - 1947.

Grant, Kittitas, Yakima, 1948.

7/ Klickitat, Yakima - 1925 to 1933 incl., 1942.

Lincoln, Whitman - 1947.

8/ Pend Oreille, Stevens - 1942, 1947.

Table 3.--Lumber Production in Oregon by Species and Year, 1869, 1879, 1889, 1899, and 1904 to 1948 incl.\*

\*From data collected cooperatively by Bureau of Census, U.S. Dept. of Commerce, and Forest Service, U.S. Dept. of Agriculture.

1948 production from data collected by West Coast Lumbermen's Association, Western Pine Association, and U.S. Forest Service.

1/ Port Orford white-cedar, western redcedar, and California incense-cedar. In 1948 Port Orford white-cedar included with "Other hardwoods." Port Orford white-cedar approximates 75 to 95 percent of the quantities shown. 2/ The quantities shown for 1929 and 1936 include a very small quantity of the true firs. 3/ Lodgepole pine. 4/ Redwood. 5/ Lodgepole pine and redwood. 6/ Includes western larch in eastern Oregon. 7/ Includes small amount Engelmann spruce. 8/ Includes hardwoods as well as Port Orford white-cedar. 9/ Includes "custom mill cut" estimated from toll charges and not included in the Census Bureau figures which total 146,483 M feet.

Table 4.--Lumber Production in Washington by Species and Year, 1869, 1879, 1889, 1899, and 1904 to 1948 Incl.<sup>1</sup>

Thousands of board feet

1/ Western redcedar. 2/ Principally Sitka spruce. Includes a very small quantity of Engelmann spruce cut east of the Cascade Range. 3/ Includes a very small quantity of the true firs marketed as larch and so reported to the Bureau of the Census. 4/ Almost exclusively lodgepole pine. 5/ Includes "custom mill cut" estimated from toll charges and not included in the Census Bureau figures which total 1,063,584 M feet. 6/ Included with Douglas-fir. 7/ Includes all hardwoods except 61 M cottonwood in Ponderosa Pine Subregion.

\*From data collected cooperatively by Bureau of the Census, U.S. Dept. of Commerce, and U. S. Forest Service, U.S. Dept. of Agriculture.

1948 production from data collected by West Coast Lumbermen's Association, Western Pine Association, and U.S. Forest Service.

1/ The Douglas-fir subregion in Oregon includes the portion of the State west of the summit of the Cascade Range; the ponderosa pine subregion includes the portion east of the summit. Production in Hood River, Jackson, and Josephine counties for all years is included in Douglas-fir subregion. 2/ In Douglas-fir subregion approximately 80 percent of production of "cedar" was Port Orford white-cedar, 17 percent western redcedar, and 5 percent California incense cedar. 3/ Sitka spruce in Douglas-fir subregion, Engelmann spruce in ponderosa pine subregion. 4/ "Western larch" shown for the Douglas-fir subregion in 1929, 1936, 1937, and 1947 was undoubtedly noble fir, one of the true firs. 5/ Redwood. 6/ Lodgepole pine. 7/ Includes western larch. 8/ Includes hardwoods as well as Port Orford white-cedar.

\* From data collected cooperatively by Bureau of Census, U.S. Dept. of Commerce, and Forest Service, U.S. Dept. of Agriculture.  
1948 production from data collected by West Coast Lumbermen's Association, Western Pine Association, and U.S. Forest Service.
